DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35
 U.S.C. 102 that form the basis for the rejections under this section made in this
 Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Dang et al. (US 5,757,594).

Dang teaches a system (fig. 1) for preventing a plurality of electronic devices (media 24) from being pulled out of an equipment rack (40) simultaneously, said system comprising: a sensor module (IR sensor 156) for detecting when a first electronic device (24, fig. 8) coupled to said equipment rack is being slid out of said equipment rack, a locking module (70 controlled by 194) for preventing a second electronic device (next to 24, fig. 8) coupled to said equipment rack from being slid out of said equipment rack, and an electronic control module (16) coupled to said sensor module and said locking module (see figs. 9 and 10) (claims 8-9 and 15-16); wherein said sensor module is selected from an optical sensor, a proximity sensor, a mechanical switch, a mechanical sensor, an electro-mechanical sensor, an ultrasonic sensor, a hall-effect sensor, and a Linear Variable Differential Transformer (LVDT) (see col. 10, lines 16-19) (claims

Application/Control Number: 10/620,640

Art Unit: 2835

10 and 17); wherein said locking module is selected from a solenoid, an electro-mechanical device, a solenoid capable of engaging and disengaging a pin or a latch, an electric motor capable of engaging and disengaging a pin or a latch, solid state circuitry, and a magnetic latch (see col. 6, line 67 through col. 7, line 2) (claims 11 and 18); wherein said electronic control module is selected from a processor, a controller, a state machine, and a microprocessor (see col. 5, lines 18-20) (claims 12 and 19); wherein said sensor module also for detecting when said first electronic device has been slid back into said equipment rack (see col. 10, lines 16-19) (claim 13); wherein said electronic control module controls said locking module based on electronic information received from said sensor module (claims 14 and 20); and a method for preventing a plurality of electronic devices from being pulled out of an equipment rack simultaneously being disclosed in the specification (sensors coupled to slide rails shown in fig. 6) (claims 1-7).

Correspondence

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yean-Hsi Chang whose telephone number is (571) 272-2038. The examiner can normally be reached on 07:30 - 16:00.

If attempts to reach the examiner by telephone are unsuccessful, the Art Unit phone number is (571) 272-2800, ext. 35. The fax phone number for the organization where this application or proceeding is assigned is (703) 305-3431

Application/Control Number: 10/620,640

Art Unit: 2835

for regular communications and for After Final communications. There are RightFax numbers and provide the fax sender with an auto-reply fax verifying receipt by the USPTO: Before-Final (703-872-9318) and After-Final (703-872-9319).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-8558.
